ACKNOWLEDGEMENT

We owe "Mr. Dadi Poudel," our IT teacher, for his advice and assistance in getting this project finished. I want to thank the department head and all the employees that collaborated with us and shared their expertise.

Finally, we would like to thank our friends and classmates for their assistance in helping us complete this fantastic project.

SELF-DECLARATION

It is important to note that the project was not simple to complete. For assistance with debugging the code, we had to turn to internet resources such as Google and W3 schools.

INTRODUCTION

The task assigned to us is to create a basic website with 5 or more pages. Creating a logo and website for any system. With a home page and a contact form. I decided to make a website for an online shopping brand where users can shop for different clothes and accessories. First, I brainstorm the idea on paper and made the wire frame about how the layout of the website is going to be.

The website's name is Muse. Users can first see the home page, where the latest collection of clothing is displayed, and they can search the wanted item in the search bar. While making this page, simple coding and padding to align the image to my needs.

On different pages, the users can see more new collections; CSS and HTML codes were used. While the cursor on the image bounces a little, it is done by the hover function. To have a clear view of the item, users can click the image, which is going to lead to showing the full image, and return by using the return button. On the nav bar, the name of the page is going to be underlined to show which page the users are on. And the individual page contains a footer.

Coding used

Different HTML codes and CSS were used to make the website attractive. To adjust the image padding was used. The hover function, div, href link the pages, fullscreen modal to show full image were used.

CONCLUSION

In the end, projects such as this one aid students in expanding their imagination and vision. We were able to put the material that was presented in class into practice thanks to the project. Nothing is simple, and although the project was a little challenging at first, the task was completed in the end.
